

Kaweesi Matia

Full-Stack Software Engineer

matiakaweesi@gmail.com | [WhatsApp](#) | [GitHub](#) | [LinkedIn](#) | [Portfolio](#) | Kampala, Uganda

SUMMARY

I have been building production software since 2018, from Kampala. For six years I delivered client interfaces at Refactory, then joined a remote US product team, and I now take my own applications from the interface through to deployment. I stay for the handoff: code that is reviewed, explained, and structured so another developer can change it. Mentoring at Microverse was that same practice, across 80+ reviews and 15+ developers.

SKILLS

Front-end: JavaScript, TypeScript, React, Next.js, Redux, jQuery, HTML5, CSS3, Tailwind CSS

Back-end: Python, FastAPI, Node.js, Express, REST APIs, JWT, SQLAlchemy, Ruby, Rails, MongoDB, Mongoose

Data and cloud: PostgreSQL, MySQL, Pandas, Docker, Vercel, Render, Netlify

Tools: Git, GitHub, Agile, test-driven development, code review, responsive design, mentoring

EXPERIENCE

Freelance Full-Stack Developer | Remote | February 2026 – Present

- Shipped six full-stack applications, each with a live demo, a GitHub repository, and a written case study.
- Took Sales Analytics and Inventory Flow from an operator workflow to a deployed service, covering imports, dashboards, stock, transfers, and role-based access.

Software Engineer | VeroSkills | Remote, USA | June 2023 – January 2026

- Built and maintained 4+ full-stack web applications in React, Node.js, and Python for a distributed US team.
- Shipped 12+ REST endpoints with Node.js and Express and connected them to React, including async fetching, state, and error handling, cutting front-end integration time by about 30%.
- Introduced 20+ reusable React components and hooks, which reduced duplicated interface code by about 25%.
- Contributed about 8–10 pull requests per sprint and reviewed teammates' changes in Git as part of Agile delivery.

Code Reviewer | Microverse | Remote | November 2022 – August 2024

- Reviewed 80+ projects and wrote feedback on structure, maintainability, and engineering practice.
- Mentored 15+ developers on Git, pull requests, and test-driven development.
- Ran 20+ pair-programming sessions on debugging, testing, and Gitflow.

Front-End Developer | Refactory Uganda | Kampala, Uganda | June 2018 – May 2024

- Delivered 8+ responsive React applications and production interfaces for business clients.
- Connected REST APIs across 10+ screens so those interfaces stayed aligned with existing backend systems.
- Released work in two-week Agile sprints on GitHub, often across 3–5 client workstreams at once.
- Maintained those products after launch, including layout fixes and features added once clients were using them.
- Coordinated with design and backend teammates so the screen, the API contract, and the sprint plan stayed in step.
- Carried client products from early screens through later releases across a six-year stretch.

HIGHLIGHTED PROJECTS

Personal applications with a live demo and source. Case studies are on the portfolio.

[Sales Analytics](#) — Import sales data and read revenue, product, and customer performance in one place. [Code](#)

[Inventory Flow](#) — Products, warehouse stock, transfers, and role-based workflows. [Code](#)

[JobConnect](#) — Profiles, job listings, applications, and sign-in. [Code](#)

[PropertyHub](#) — Listings with search, filters, and a map. [Code](#)

[Learnova](#) — Courses and signed-in learner workflows. [Code](#)

[FoodHub](#) — Menus, cart, checkout, and admin workflows. [Code](#)

EDUCATION

VeroSkills — Certificate in Full-Stack Software Development | 2023–2024

- 1,500+ hours of full-stack practice while already working, using Python, JavaScript, and React.
- Applied Git, REST APIs, testing, and Agile delivery on applications that were deployed.

Microverse — Certificate in Software Engineering | 2022–2024

- 1,300+ hours on algorithms, data structures, and full-stack development.
- Remote pair programming and daily standups with international developers, using GitHub and Gitflow.

Kyambogo University — Bachelor's in Telecommunication Engineering | 2014–2017

- Coursework and laboratory work in telecommunications, electronics, networking, and communication systems.
- Technical projects that trained system analysis and working inside real constraints.
